

TDP-43 knockdown cells

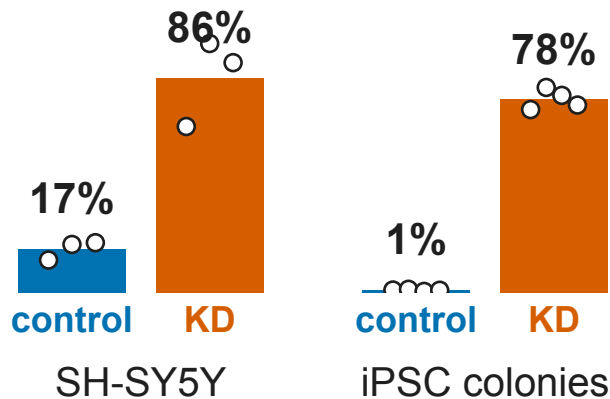

mRNA, RT-qPCR, n = 4

3 wells per group; separate cultures, not paired with mRNA

Public RNA-seq

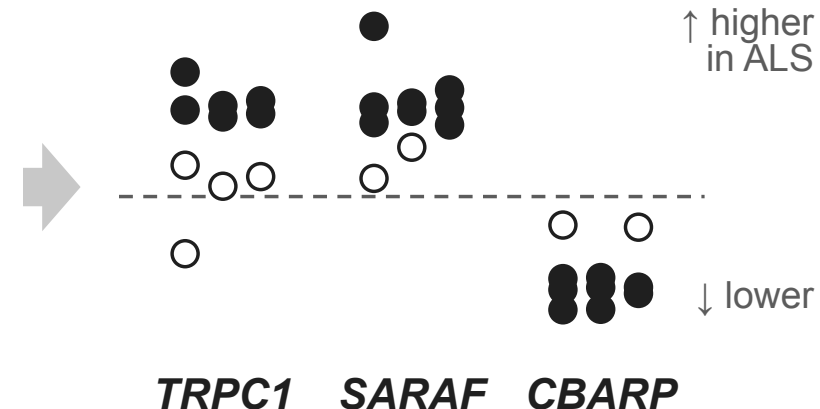

CBARP splicing changed in 5 of 6 datasets

share of exon-4 reads using the alternative 3' splice site

ALS tissue

TRPC1, SARAF up; CBARP down

one dot per region, Cliff's δ ;
filled dots: $q < 0.05$

RNA candidates for replicated follow-up, not a mechanism
